5. A heat exchanger mounted on a vehicle, comprising:

10 a header tank arranged at each of the longitudinal ends of the tubes and extending in the direction perpendicular to the length of the tubes while communicating with a plurality of said tubes; and

characterized in that said header tanks are each formed with a reinforcing wall projected in the direction perpendicular to the length of the header tanks and extending longitudinally of the header tanks.

25 7. A heat exchanger as described in claim 4,
characterized in that said brackets are each formed with
an assembling portion for assembling equipment other than
the heat exchanger.

~~9. A heat exchanger as described in claim 3, characterized in that said brackets are each formed with an assembling portion for assembling the headlight.~~

35 10. A heat exchanger as described in claim 4,
characterized in that said brackets are each formed with
an assembling portion for assembling the headlight.

~~11. A heat exchanger as described in claim 5, characterized in that said brackets are each formed with an assembling portion for assembling the headlight.~~

12. A heat exchanger as described in claim 6,
characterized in that said brackets are of two types, one
formed with the assembling portion and the other not
formed with the assembling portion.

13. A heat exchanger as described in claim 7,
characterized in that said brackets are of two types, one
10 formed with the assembling portion and the other not
formed with the assembling portion.

14. A heat exchanger as described in claim 8, characterized in that said brackets are of two types, one formed with the assembling portion and the other not formed with the assembling portion.

~~15. A heat exchanger as described in claim 12, characterized in that the two types of brackets and the assembling portion are integrated with each other.~~

16. A heat exchanger as described in claim 13,
20 characterized in that the two types of brackets and the
assembling portion are integrated with each other.

17. A heat exchanger as described in claim 14, characterized in that the two types of brackets and the assembling portion are integrated with each other.

18. A heat exchanger as described in claim 9, characterized in that said brackets are of two types, one formed with the assembling portion and the other not formed with the assembling portion.

19. A heat exchanger as described in claim 10,
30 characterized in that said brackets are of two types, one
formed with the assembling portion and the other not
formed with the assembling portion.

20. A heat exchanger as described in claim 11, characterized in that said brackets are of two types, one formed with the assembling portion and the other not formed with the assembling portion.

~~21. A heat exchanger as described in claim 18,~~
